

# INGROUND VINYL LINER REPLACEMENT

## How often do pool liners need to be replaced?

Vinyl pool liners typically last from 10-15 years depending on a range of factors. Variables like water chemistry, sun exposure, frequency of use & regular cleaning can all affect the lifespan of your liner.

## Four signs it's time to replace your liner:

1. Visible tears or cracks in the liner especially if in corners.
2. Wrinkles on the walls or floor may indicate a leak or stretching of the vinyl.
3. Extreme fading of the liner pattern.
4. Liner constantly falling out of the track or detaching from the bead.

## Replacing your vinyl liner creates an entirely new look!

Replacing a vinyl liner gives you the unique opportunity to update your pool to a fresh, new look with rich colors. It's also a great time to consider new features. Maybe add some custom steps or a tanning ledge (yes, even to a vinyl liner pool), a new color-changing LED light, new resin handrails or ladders in colors rather than that old rusty, metal one, new variable speed pump, or even upgrade your sanitizing system to SALT. Pools Patios & Porches installs liners between April and October in the Maryland area when warm weather provides the best installation. FREE estimates are available and require a measurement.

## Replacing your vinyl liner is an investment in your home and family.

A new look liner with rich colors and upgraded features completely changes the look of your backyard and suddenly makes that old pool look 10x more inviting and exciting to use. Financially, you'll recoup your investment if you sell your house. Buyers will be more receptive and excited about a great looking pool that's ready to enjoy and offer you full asking price. Even if you don't plan on selling, you'll find your kids and grandchildren will want to spend more time visiting, ready for fun, games and smiles.
